ABOUT ME

Graduated Computer Engineering student at NAST focused on full-stack web development (MERN/PERN). I enjoy building

products with real users on the other end - from a client-facing restaurant site built during my internship to a hyperlocal e-commerce platform for my hometown.

EXPERIENCE

MERN Stack Developer Intern - Sipalaya Info Tech Pvt Ltd

June 2026 – September 2026

- Worked as a MERN Stack (MongoDB, Express, React, Node.js) developer intern, contributing to client-facing web applications from build to delivery.
- Built "Everest Momo," a client-facing restaurant ordering website, using React on the frontend with Auth0 for authentication and a demo eSewa payment integration.
- Worked with REST APIs and Node/Express backends alongside the team using Git/GitHub, gaining hands-on experience meeting real client requirements and deadlines.

SKILLS

Languages: JavaScript, Python, C++, Java, C,

HTML, CSS **Frontend:** React, Tailwind CSS,

Bootstrap, Flutter **Backend:** Node.js, Express.js,

Flask, RESTful APIs **Databases:** PostgreSQL,

MongoDB, Supabase

Tools & Platforms: Git, GitHub, Docker, Auth0, eSewa Integration

PROJECTS

Smart Nepal Buy - Hyperlocal E-Commerce & Delivery Platform

Tech: PERN (PostgreSQL, Express.js, React, Node.js)

- Designed and built a hyperlocal e-commerce and delivery platform tailored for Dhangadhi city, connecting local shops with nearby customers.
- Built out the core marketplace flow - product listings, cart and orders, and delivery coordination - end-to-end on the PERN stack.

Keegle Exercise - Fitness Tracker with Web + Android Sync

Tech: Web app, Android app, real-time sync

- Built a workout tracking app with two exercise modes, usable from both a web app and a companion Android app.
- Android app syncs with the web version in real time, surfacing exercise history, daily progress, and user settings across both.

Everest Momo - Client-Facing Restaurant Website

Tech: React, Auth0, eSewa (demo integration) - built during Sipalaya Info Tech internship

- Built a frontend-only, client-facing website for a local restaurant showcasing its menu and product variety.
- Integrated Auth0 for user login/authentication and a demo eSewa flow for the checkout experience.

NAST Eat - Campus Cafeteria Ordering System

Tech: HTML, CSS, Bootstrap, Flask (Python)

- Built a web app letting students and staff at my college order food from the cafeteria without queuing up in person.
- Handled user login, OTP verification, and a simulated payment flow - learned a lot about session handling and form validation.

RESEARCH

Co-Researcher - "The Role of AI in Shaping Perceived Academic Performance: Insights from Engineering Students in Sudurpaschim Province, Nepal"

2025 - 2026

Final-year research project | Submitted to Dept. of Research & HRD, NAST | Co-authored with 3 peers

- Co-designed and ran a mixed-methods study on generative-AI adoption among 200 engineering undergraduates across two campuses, combining a 25-item Likert-scale survey with thematic analysis of open-ended responses.
- Led field data collection, adapting from an online form to hard-copy distribution mid-study to resolve connectivity issues, and ran statistical analysis (reliability testing, ANOVA with Tukey's HSD, multiple linear regression) to identify predictors of perceived academic performance.
- Coded qualitative responses from 85 participants into six recurring themes and co-authored the final report, translating findings into policy recommendations for institutional AI governance.

EDUCATION

NAST - B.E. in Computer Engineering (Pokhara University),

Graduated: Waiting for convocation

NAST - Higher Secondary Education (Grade 11-12)

GPA: 3.10

Shree J.K Secondary School - Secondary Education Examination (SEE)

GPA: 3.80

ACHIEVEMENTS & CERTIFICATES

Cyber Security Fundamentals Workshop

20 Hours

Covered core concepts including network security, threat analysis, and defensive practices.
